At this point all I need is a current map.....my request for the map will initiate PTP to actually have the map made as EDX Engineering informs me that an up to date map does not exist. Once the map is complete, I'll meet w/ the contractor on site and do a thorough walk-through. At that point we'll work-out monitoring and maintenance requirements (actual sampling points and frequencies) given the existing lay-out, w/ added attention to proposed (future) additions to the system. For example, rotation of the drainfields can be prescribed given flow and seasonal considerations. But all of this will be done after an accurate map is produced and I've spent time w/ the contractor at the site understanding the system, and it's capabilities and limitations.

Re: PTP permit mod

I'm fine with the "softer" touch. However, shouldn't we ask for everything we need to move forward with the permit mod/reissuance? Or are we not in a position to know everything we need at the present time? Or is an updated schematic the only thing we need? Inquiring minds want to know!

PTP permit mod

Dave:

I've been working w/ PTP's contractor, EXD Engineering, toward modifying the PineView permit to bring it up to date (no, that's another case) given the disparity between what's actually on the ground at the site and what the existing permit says/represents. To begin the process, I need an updated schematic or map of the system as it now exists.....purpose of the attached draft letter which is to be signed by you. I made it clear to EXD that I was in no position to direct or require work products from them, and that I could only go through the owners of the company to gain products related to the permit mod.

My preference is to approach this permit mod from an "agency-friendly" perspective, as opposed to a more legal bent. Thus, the attached letter does not include legal language associated w/ EPA's authority to request information. I'd like to establish a "cooperative" working relationship w/ PTP and their contractor on this effort, and if that fails then we can go the other route. Let me know what you think.
Aaron
